

WIRE CHANNEL DEVICE

ABSTRACT OF THE DISCLOSURE

[0024] This invention provides apparatus and methods of use for a wire channel device that is positioned between an upper siding panel and a lower siding panel along the side of a building and that routes, supports, and/or secures one or more wires. According to embodiments of this invention, the wire channel device includes an upwardly extending arm, a transverse leg, and a wire channel having a downwardly extending leg, a channel portion, and a rear upwardly extending leg.
